1 [Classification: Categorizing information objects from user access patterns](#)

Mao Chen, Andrea LaPaugh, Jaswinder Pal Singh

 November 2002 **Proceedings of the eleventh international conference on Information and knowledge management**

 Full text available: pdf(321.09 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Many web sites have dynamic information objects whose topics change over time. Classifying these objects *automatically* and *promptly* is a challenging and important problem for site masters. Traditional content-based and link structure based classification techniques have intrinsic limitations for this task. This paper proposes a framework to classify an object into an existing category structure by analyzing the users' traversals in the category structure. The key idea is to infer a ...

4 Round robin classification

Johannes Fürnkranz

March 2002 **The Journal of Machine Learning Research**, Volume 2

Full text available:  [pdf\(250.25 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

In this paper, we discuss round robin classification (aka pairwise classification), a technique for handling multi-class problems with binary classifiers by learning one classifier for each pair of classes. We present an empirical evaluation of the method, implemented as a wrapper around the Ripper rule learning algorithm, on 20 multi-class datasets from the UCI database repository. Our results show that the technique is very likely to improve Ripper's classification accuracy without having a hi ...

Keywords: class binarization, ensemble techniques, inductive rule learning, multi-class problems, pairwise classification

5 Optimizing exact genetic linkage computations

Maayan Fishelson, Dan Geiger

April 2003 **Proceedings of the seventh annual international conference on Computational molecular biology**

Full text available:  [pdf\(188.29 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Genetic linkage analysis is a challenging application which requires Bayesian networks consisting of thousands of vertices. Consequently, computing the likelihood of data, which is needed for learning linkage parameters, using exact inference procedures calls for an extremely efficient implementation that carefully optimizes the order of conditioning and summation operations. In this paper we present the use of stochastic greedy algorithms for optimizing this order. Our algorithm has been incorp ...

6 Energy efficient microarchitectural techniques: Pipeline stage unification: a low-energy consumption technique for future mobile processors

Hajime Shimada, Hideki Ando, Toshio Shimada

August 2003 **Proceedings of the 2003 international symposium on Low power electronics and design**

Full text available:  [pdf\(111.18 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Recent mobile processors are required to exhibit both low-energy consumption and high performance. To satisfy these requirements, dynamic voltage scaling (DVS) is currently employed. However, its effectiveness will be limited in the future because of shrinking the variable supply voltage range. As an alternative, we previously proposed pipeline stage unification (PSU), which unifies multiple pipeline stages without reducing the supply voltage at a power-saving mode. This paper compares effective ...

7 Generating highly-routable sparse crossbars for PLDs

Guy Lemieux, Paul Leventis, David Lewis

February 2000 **Proceedings of the 2000 ACM/SIGDA eighth international symposium on**

Field programmable gate arrays

Full text available:  pdf(952.31 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

A method for evaluating and constructing sparse crossbars which are both area efficient and highly routable is presented. The evaluation method uses a network flow algorithm to accurately compute the percentage of random test vectors that can be routed. The construction method attempts to maximize the spread of the switch locations, such that any given subset of input wires can connect to as many output wires as possible. Based on Hall's Theorem, we argue that this increases the likelihood ...

8 Session S4.2: program transformation: Optimizing inter-nest data locality

M. Kandemir, I. Kadayif, A. Choudhary, J. A. Zambreno

October 2002 **Proceedings of the 2002 international conference on Compilers, architecture, and synthesis for embedded systems**

Full text available:  pdf(272.47 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

By examining data reuse patterns of four array-intensive embedded applications, we found that these codes exhibit a significant amount of inter-nest reuse (i. e., the data reuse that occurs between different nests). While traditional compiler techniques that target array-intensive applications can exploit intra-nest data reuse, there has not been much success in the past in taking advantage of inter-nest data reuse. In this paper, we present a compiler strategy that optimizes inter-nest reuse usi ...

4 Software engineering environment: Software estimation using the SLIM tool

Nikki Panlilio-Yap

November 1992 **Proceedings of the 1992 conference of the Centre for Advanced Studies on Collaborative research - Volume 1**

Full text available:  pdf(1.29 MB) Additional Information: [full citation](#), [abstract](#), [references](#)

Planning the development of a software product involves estimating the required effort, project duration, resource allocation, and latent defects when the product ships. Coming up with reasonable estimates seems to be a pervasive problem. In the absence of an internally developed tool based on historical data from the IBM Canada Ltd. Laboratory or similar IBM laboratories, the use of one or more commercially available estimation tools is useful. Some of these tools have underlying models based o ...

7 The infeasibility of experimental quantification of life-critical software reliability

Ricky W. Butler, George B. Finelli

September 1991 **ACM SIGSOFT Software Engineering Notes , Proceedings of the conference on Software for critical systems**, Volume 16 Issue 5

Full text available:  pdf(1.09 MB) Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

8 Analysis of Efficiency and Accuracy of Learning in Minority Games

Kiyoshi Izumi, Tomohisa Yamashita, Koichi Kurumatani

July 2004 **Proceedings of the Third International Joint Conference on Autonomous Agents and Multiagent Systems - Volume 3**

Full text available:  [pdf\(86.46 KB\)](#) Additional Information: [full citation](#), [abstract](#)

In this paper, we constructed three types of agents, which are different in efficiency and accuracy of learning. They were compared using acquired payoff in a game-theoretic situation, a minority game. As a result, different types of learning methods got the highest payoff according to the complexity of environmental change and learning speed.

9 Reconfigurable computing: analysis and trends: FPGAs vs. CPUs: trends in peak floating-point performance

Keith Underwood

February 2004 **Proceeding of the 2004 ACM/SIGDA 12th international symposium on Field programmable gate arrays**

Full text available:  [pdf\(206.40 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Moore's Law states that the number of transistors on a device doubles every two years; however, it is often (mis)quoted based on its impact on CPU performance. This important corollary of Moore's Law states that improved clock frequency plus improved architecture yields a doubling of CPU performance every 18 months. This paper examines the impact of Moore's Law on the peak floating-point performance of FPGAs. Performance trends for individual operations are analyzed as well as the performance tr ...

10 Using background knowledge to speed reinforcement learning in physical agents

Daniel Shapiro, Pat Langley, Ross Shachter

May 2001 **Proceedings of the fifth international conference on Autonomous agents**

Full text available:  [pdf\(483.84 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

This paper describes Icarus, an agent architecture that embeds a hierarchical reinforcement learning algorithm within a language for specifying agent behavior. An Icarus program expresses an approximately correct theory about how to behave with options at varying levels of detail, while the Icarus agent determines the best options by learning from experience. We describe Icarus and its learning algorithm, then report on two experiments in a vehicle control domain. The first examines the ben ...

[Publisher Site](#)

Commercial applications are an important, yet often overlooked, workload with significantly different characteristics from technical workloads. The potential impact of these differences is that computers optimized for technical workloads may not provide good performance for commercial applications, and these applications may not fully exploit advances in processor design. To evaluate these issues, we use hardware counters to measure architectural features of a four-processor Pentium Pro-based se ...

- 13 A first step to formally evaluate collaborative work
Ricardo Baeza-Yates, José A. Pino
November 1997 **Proceedings of the international ACM SIGGROUP conference on Supporting group work : the integration challenge: the integration challenge**

Full text available:  pdf(725.59 KB) Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

Keywords: CSCW, collaborative retrieval, quantitative evaluation

- 14 A case for Wafer-scale interconnected memory arrays
T.-C Chiueh
December 1992 **Proceedings of the 1992 ACM/IEEE conference on Supercomputing**

Full text available:  pdf(865.24 KB) Additional Information: [full citation](#), [references](#), [index terms](#)

- 15 Session S4.2: program transformation: Optimizing inter-ness data locality
M. Kandemir, I. Kadayif, A. Choudhary, J. A. Zambreno
October 2002 **Proceedings of the 2002 international conference on Compilers, architecture, and synthesis for embedded systems**

Full text available:  pdf(272.47 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

By examining data reuse patterns of four array-intensive embedded applications, we found that these codes exhibit a significant amount of inter-ness reuse (i. e., the data reuse that occurs between different nests). While traditional compiler techniques that target array-intensive applications can exploit intra-ness data reuse, there has not been much success in the past in taking advantage of interness data reuse. In this paper, we present a compiler strategy that optimizes inter-ness reuse usi ...

Keywords: array-intensive codes, cache locality, data reuse, embedded applications, inter-ness optimization

- 16 Generating highly-routable sparse crossbars for PLDs

Guy Lemieux, Paul Leventis, David Lewis

February 2000 **Proceedings of the 2000 ACM/SIGDA eighth international symposium on Field programmable gate arrays**

Full text available:  pdf(952.31 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

A method for evaluating and constructing sparse crossbars which are both area efficient and highly routable is presented. The evaluation method uses a network flow algorithm to accurately compute the percentage of random test vectors that can be routed. The construction method attempts to maximize the spread of the switch locations, such that any given subset of input wires can connect to as many output wires as possible. Based on Hall's Theorem, we argue that this increases the likelihood ...

17 [Virtual path routing for survivable ATM networks](#)

Kazutaka Murakami, Hyong S. Kim

February 1996 **IEEE/ACM Transactions on Networking (TON)**, Volume 4 Issue 1

Full text available:  pdf(2.24 MB)

Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)
